

CHRISTINA KIM

Evanston, Illinois • (253) 345-9372 • christina.kim670@u.northwestern.edu
<https://www.linkedin.com/in/christina-kim-08b3a5230/>

EDUCATION

Northwestern University, Evanston, IL

June 2026

B.S in Biomedical Engineering, Minor in Entrepreneurship & Segal Design Certificate in Product Development

Relevant Coursework: Linear Algebra, Statics and Dynamics Engineering Mechanics, Material Science: Structure and Properties, Single and Multivariable Differential and Integral Calculus, Molecular & Cellular Biology, Organic Chemistry, Statistics, Thermodynamics, Fluid Dynamics, Physics, Computational Physiology, Regenerative Engineering, Circuits and Systems

WORK EXPERIENCE

Vantive (Formerly Baxter), Plymouth, MN

June 2025 – August 2025

R&D Exploratory & Innovation Engineering Intern

- Directed performance testing and two cross-functional user testing sessions with interns, human factors engineers, medical leads, and commercial leads to identify usability gaps and translate findings into actionable prototype improvements.
- Developed design concepts and executed rapid prototyping to refine product and retire killer questions, ensuring feasibility.
- Innovated on low-margin disposable sets across future global markets, conducting manufacturing analysis to build a business case for standardization projected to offset new device costs for patients and reduce current cost by \$0.05 per set.

STUDENT ACTIVITIES

Kappa Theta Pi (Pre-professional Technology Fraternity), Evanston, IL

April 2023 – Present

Member and Capstone Project Advisor

- Serve as project advisor, mentoring 1-2 engineering students per quarter on 3D printing techniques and research, fostering hands-on project development throughout the project cycle assisting in technical research and design iterations.
- Actively participate in fraternity chapter meetings and contribute in all recruitment and rushing events, including leading technological workshops, networking events, individual and group interviews, and coffee chats with new pledges.
- Engage in community service initiatives to promote technology outreach and skill-building within our local community.

PROJECT EXPERIENCE

Segal Design Institute, Evanston, IL

March 2022 – June 2023

Engineering Design and Communications Ideation and Prototype Manager

- Led the ideation and prototype manufacturing workflow to develop an automated showering process tailored for residents at Misericordia, a wellness home for over 600 children and adults with diverse developmental and physical disabilities.
- Utilized advanced fabrication techniques such as 3D printing and laser cutting to create and test various prototypes.
- Led research initiatives focused on Intellectual and Developmental Disabilities (IDD) and ABA Therapy to deeply understand user needs to create a safe and effective design that meet requirements of Misericordia residents.
- Created a Figma app prototype that allows staff at Misericordia to select shower steps based on residents' preference and generate personalized shower-step video catered for individuals receiving ABA therapy to shower independently.

Capstone Project, Evanston, IL

April 2023 – June 2023

3D Printed Kidney Scaffold

- Designed an individual project to research, design, and produce a 3D printed scaffold to explore tissue engineering fields.
- Collaborated with graduate students and professors to strengthen understanding in polymers and printing operations.
- Demonstrated proficiency in utilizing Solid works, CURA, and diverse printing polymers to create and optimize 3D models of kidney scaffolds showcasing comprehensive skill in the field of additive manufacturing and design.

Lurie Children's Hospital | Stanley Manne Children's Research Institute, Chicago, IL

September 2024 – present

Project Manager

- Collaborated with a multidisciplinary team to address pediatric nasogastric feeding tube complications in infants post surgery focusing on reducing unwanted tube removal, preventing skin irritation, and minimizing strangulation risks.
- Conducted user research through meetings with different user groups (doctors, caregivers, guardians) to identify pain points, and lead ideation, medical research, prototyping, and product testing to develop patient-centered solutions for families.
- Advanced project towards commercialization by supporting patent filing, preparing for FDA registration, planning and conducting performance testing, and evaluating manufacturing methods with hospital partners.

SKILLS & INTERESTS

Technical: Laboratory Experiences; Research Experience in sustainability and waste management, Solidworks CAD, 3D Printing (FDM/SLA), MATLAB(signal processing & modeling), Python, Laser Cutting, LabBench/nScope (instrumentation & sensors)

Regulatory & Business: FDA Regulatory Exposure, Patent Research and Drafting, Business Case Development

Languages: English (Native), Korean (Native), Chinese (Introductory)

Additional Interests: Product Design, Tissue Engineering, Coffee, Kickboxing, Cosmetics Formulation, Medical Device
